Respuesta:

El trasplante renal es un tratamiento médico quirúrgico que se ofrece a un paciente que tiene una insuficiencia renal crónica avanzada. Se realiza tras una serie de pasos que se detallan en la sección de información en la página de pre-trasplante, donde el paciente puede conocer los requisitos y procedimientos de trasplante, así como el proceso de selección de donante y la espera de trasplante. Al momento de elegir el donante, se debe considerar la compatibilidad entre el paciente y el donante.
